to tangible outcomes

# All together now? Inequalities in power and participation in a rapidly changing digital world

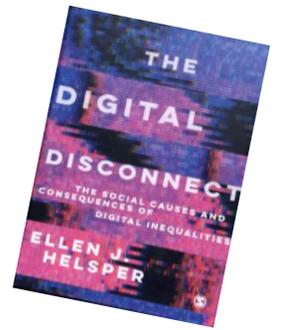

**Dr. Ellen J. Helsper**

Professor in Socio-Digital Inequalities

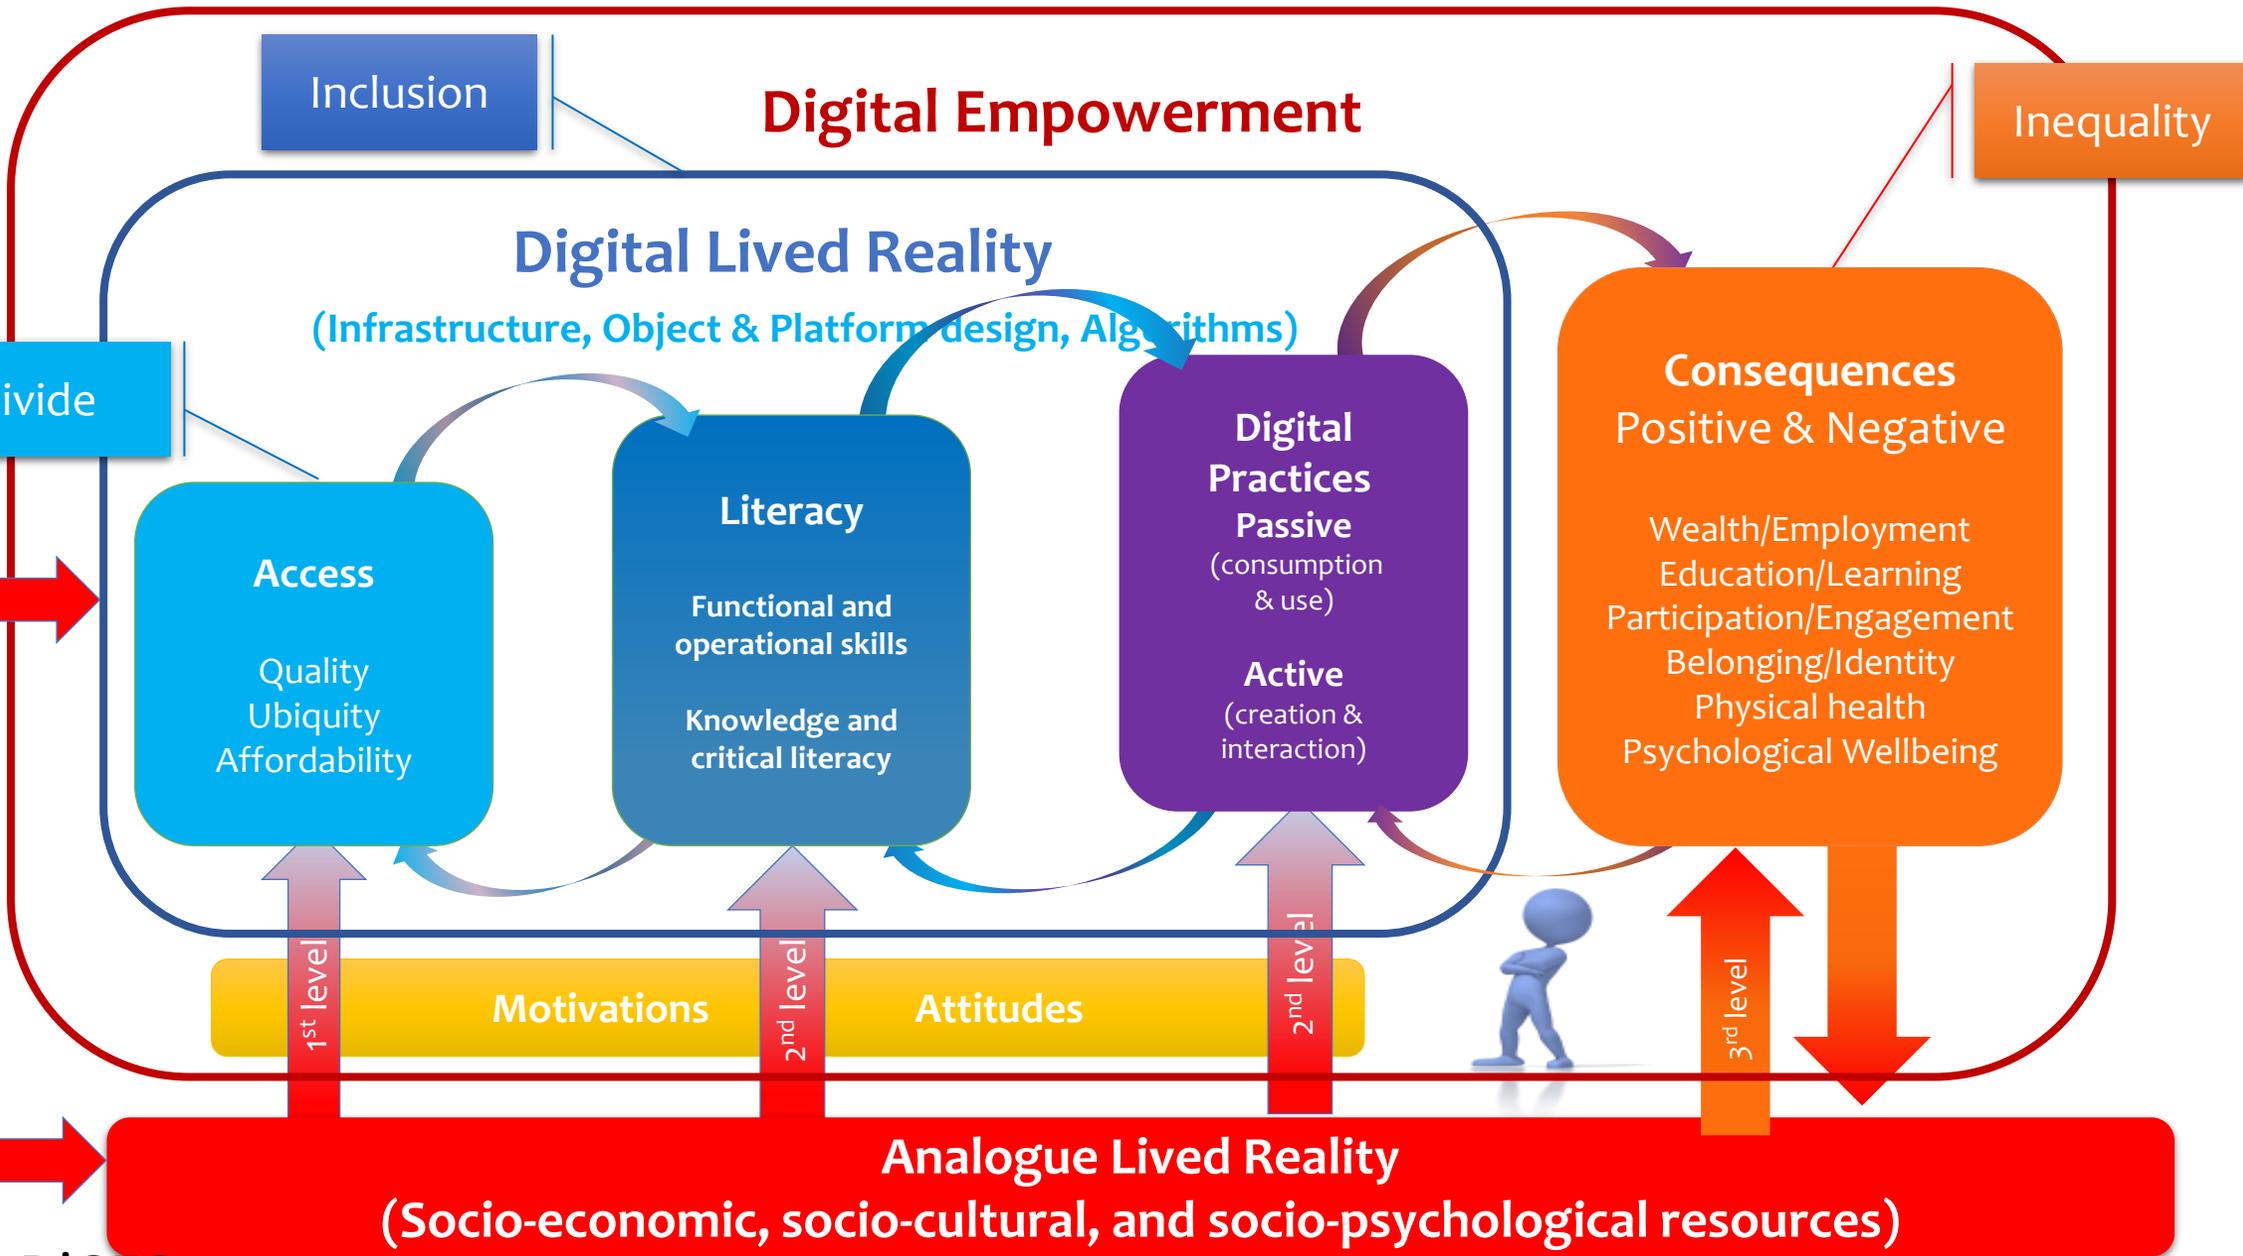

Media and Communications Department & International Inequalities Institute

London School of Economics and Political Science

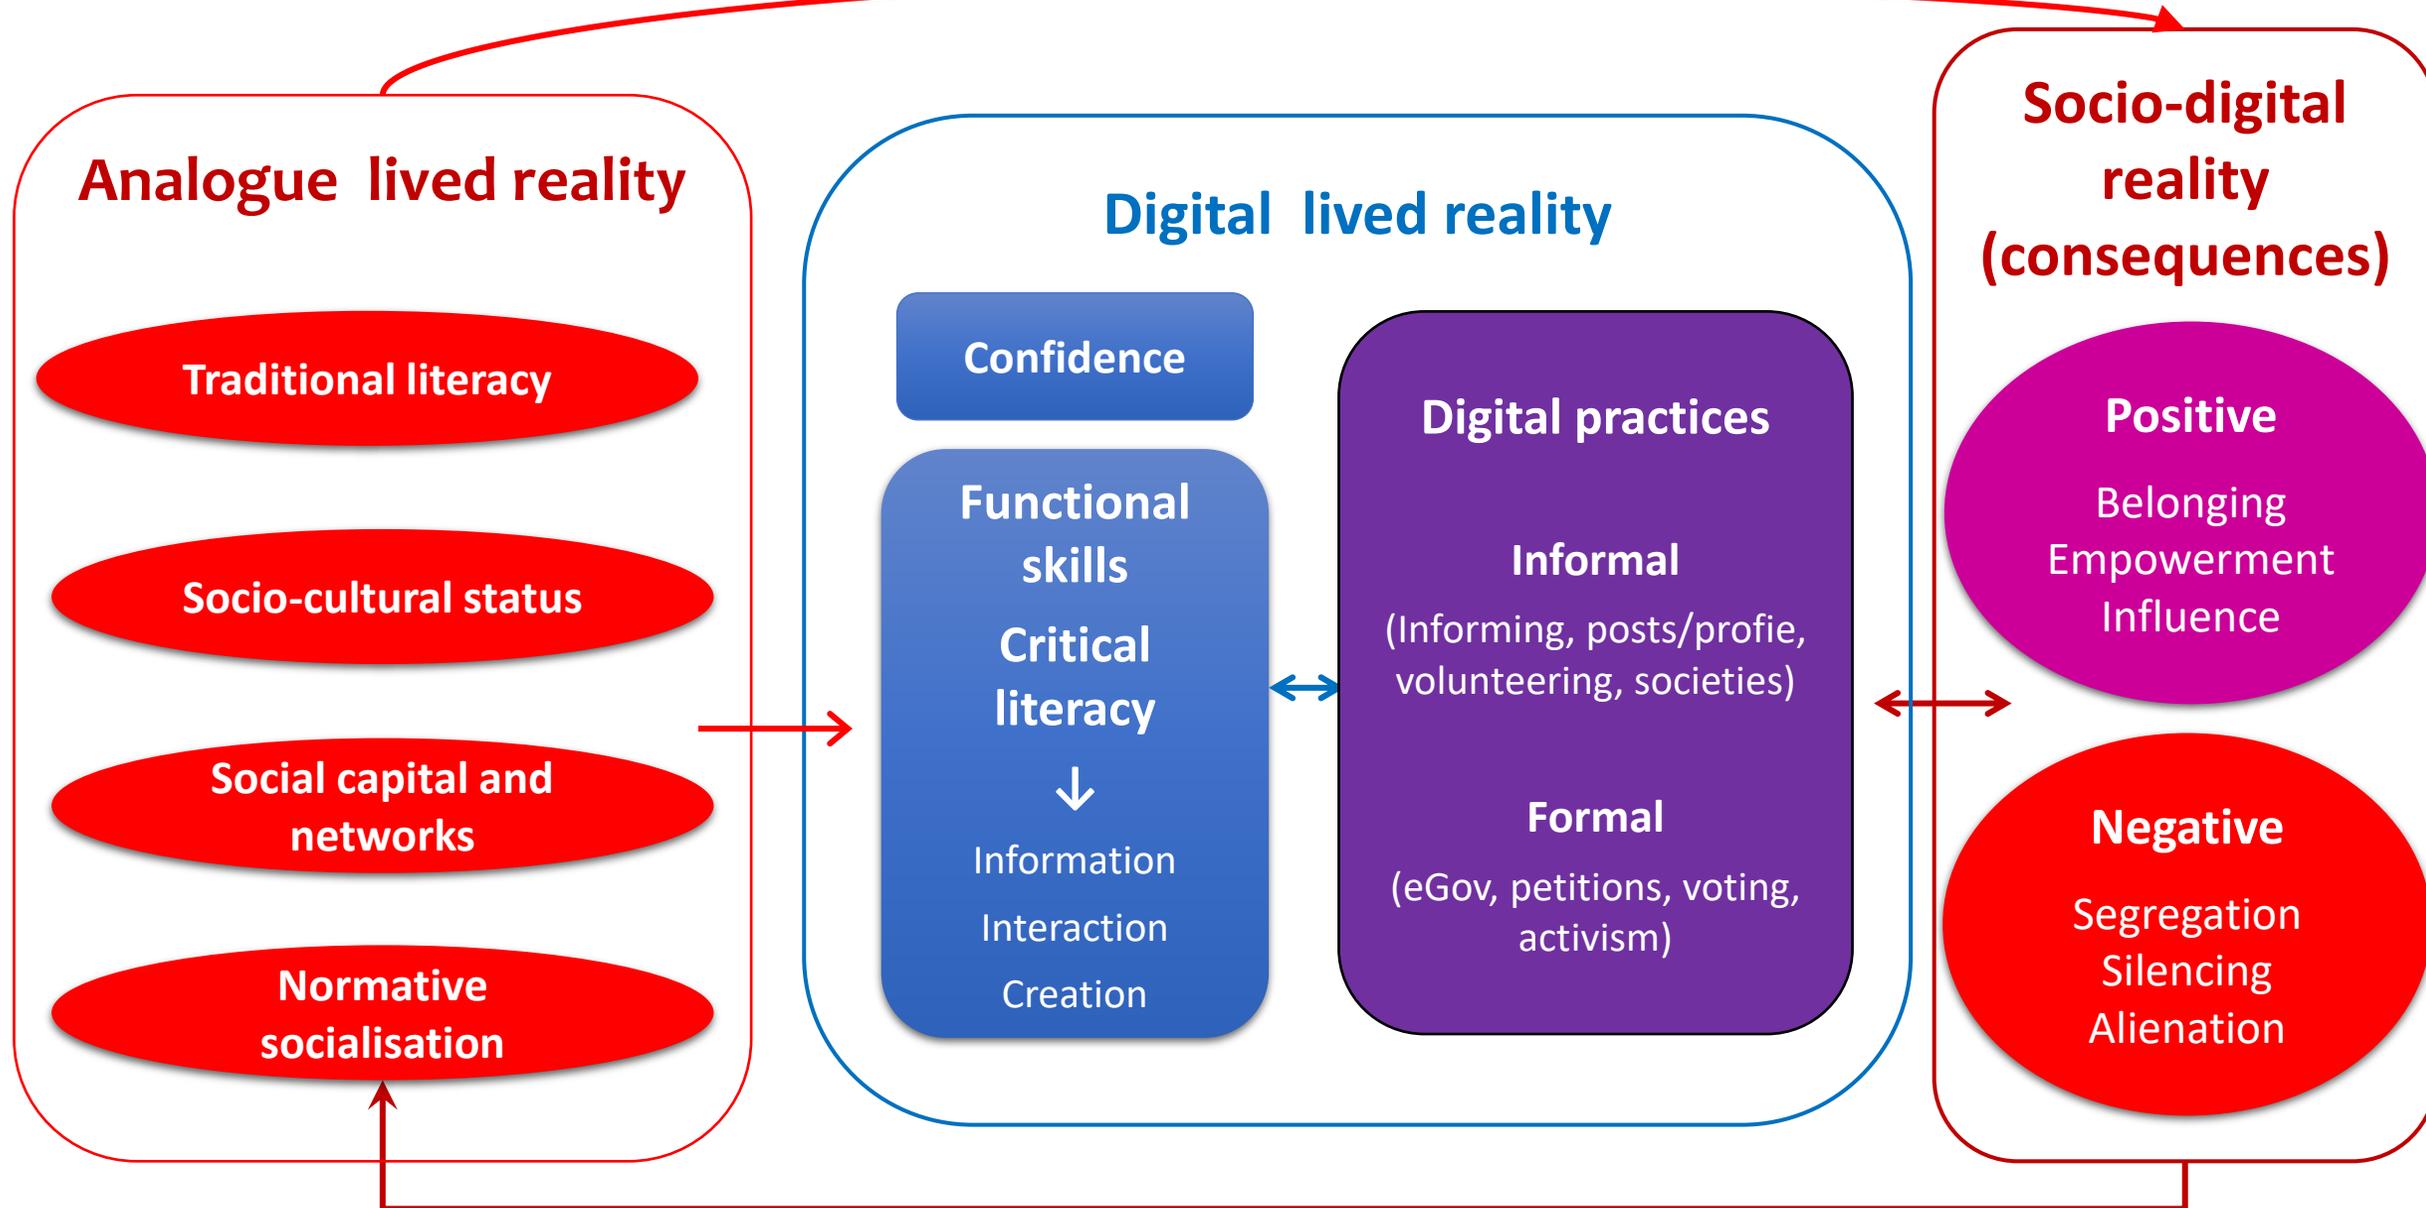

[e.j.helsper@lse.ac.uk](mailto:e.j.helsper@lse.ac.uk) / @ellenhel

Global, national, and local economics, politics, and socio-cultural structures

# Inequalities in participation (and power)

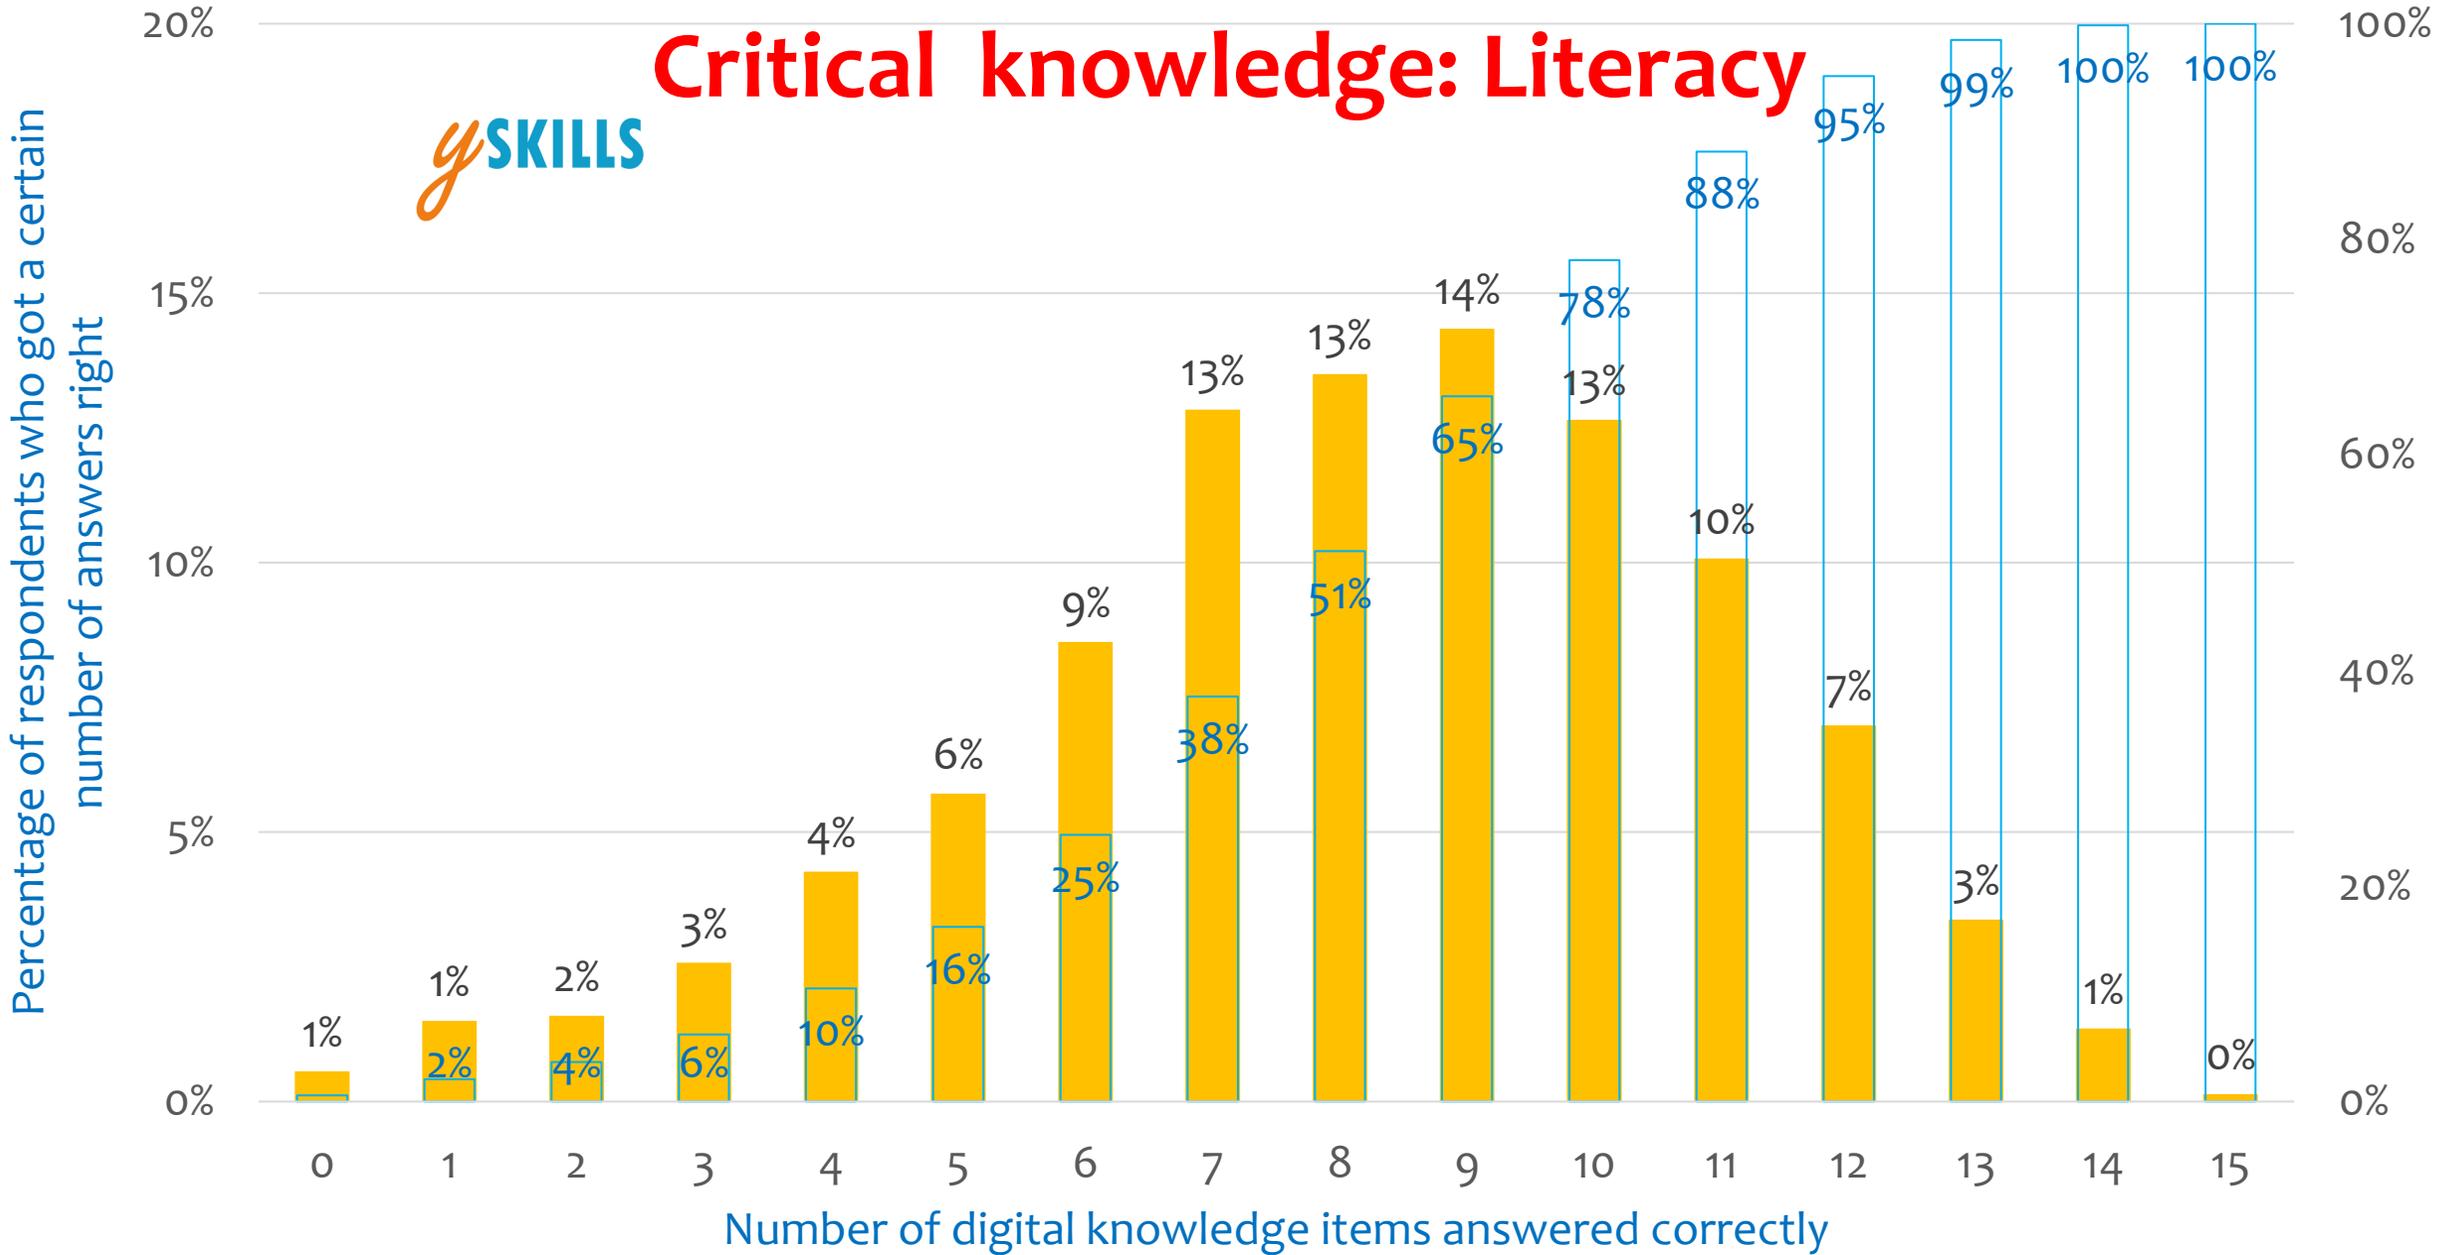

# Digital Skills and Literacy

A network diagram consisting of numerous black circular nodes connected by thin black lines, set against a solid red background. The nodes are arranged in a complex, interconnected pattern that spans the width of the image, with some clusters and some isolated nodes. The overall structure suggests a digital network or a community of interconnected individuals.

For participation and  
empowerment

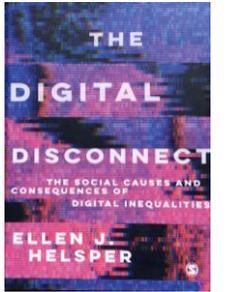

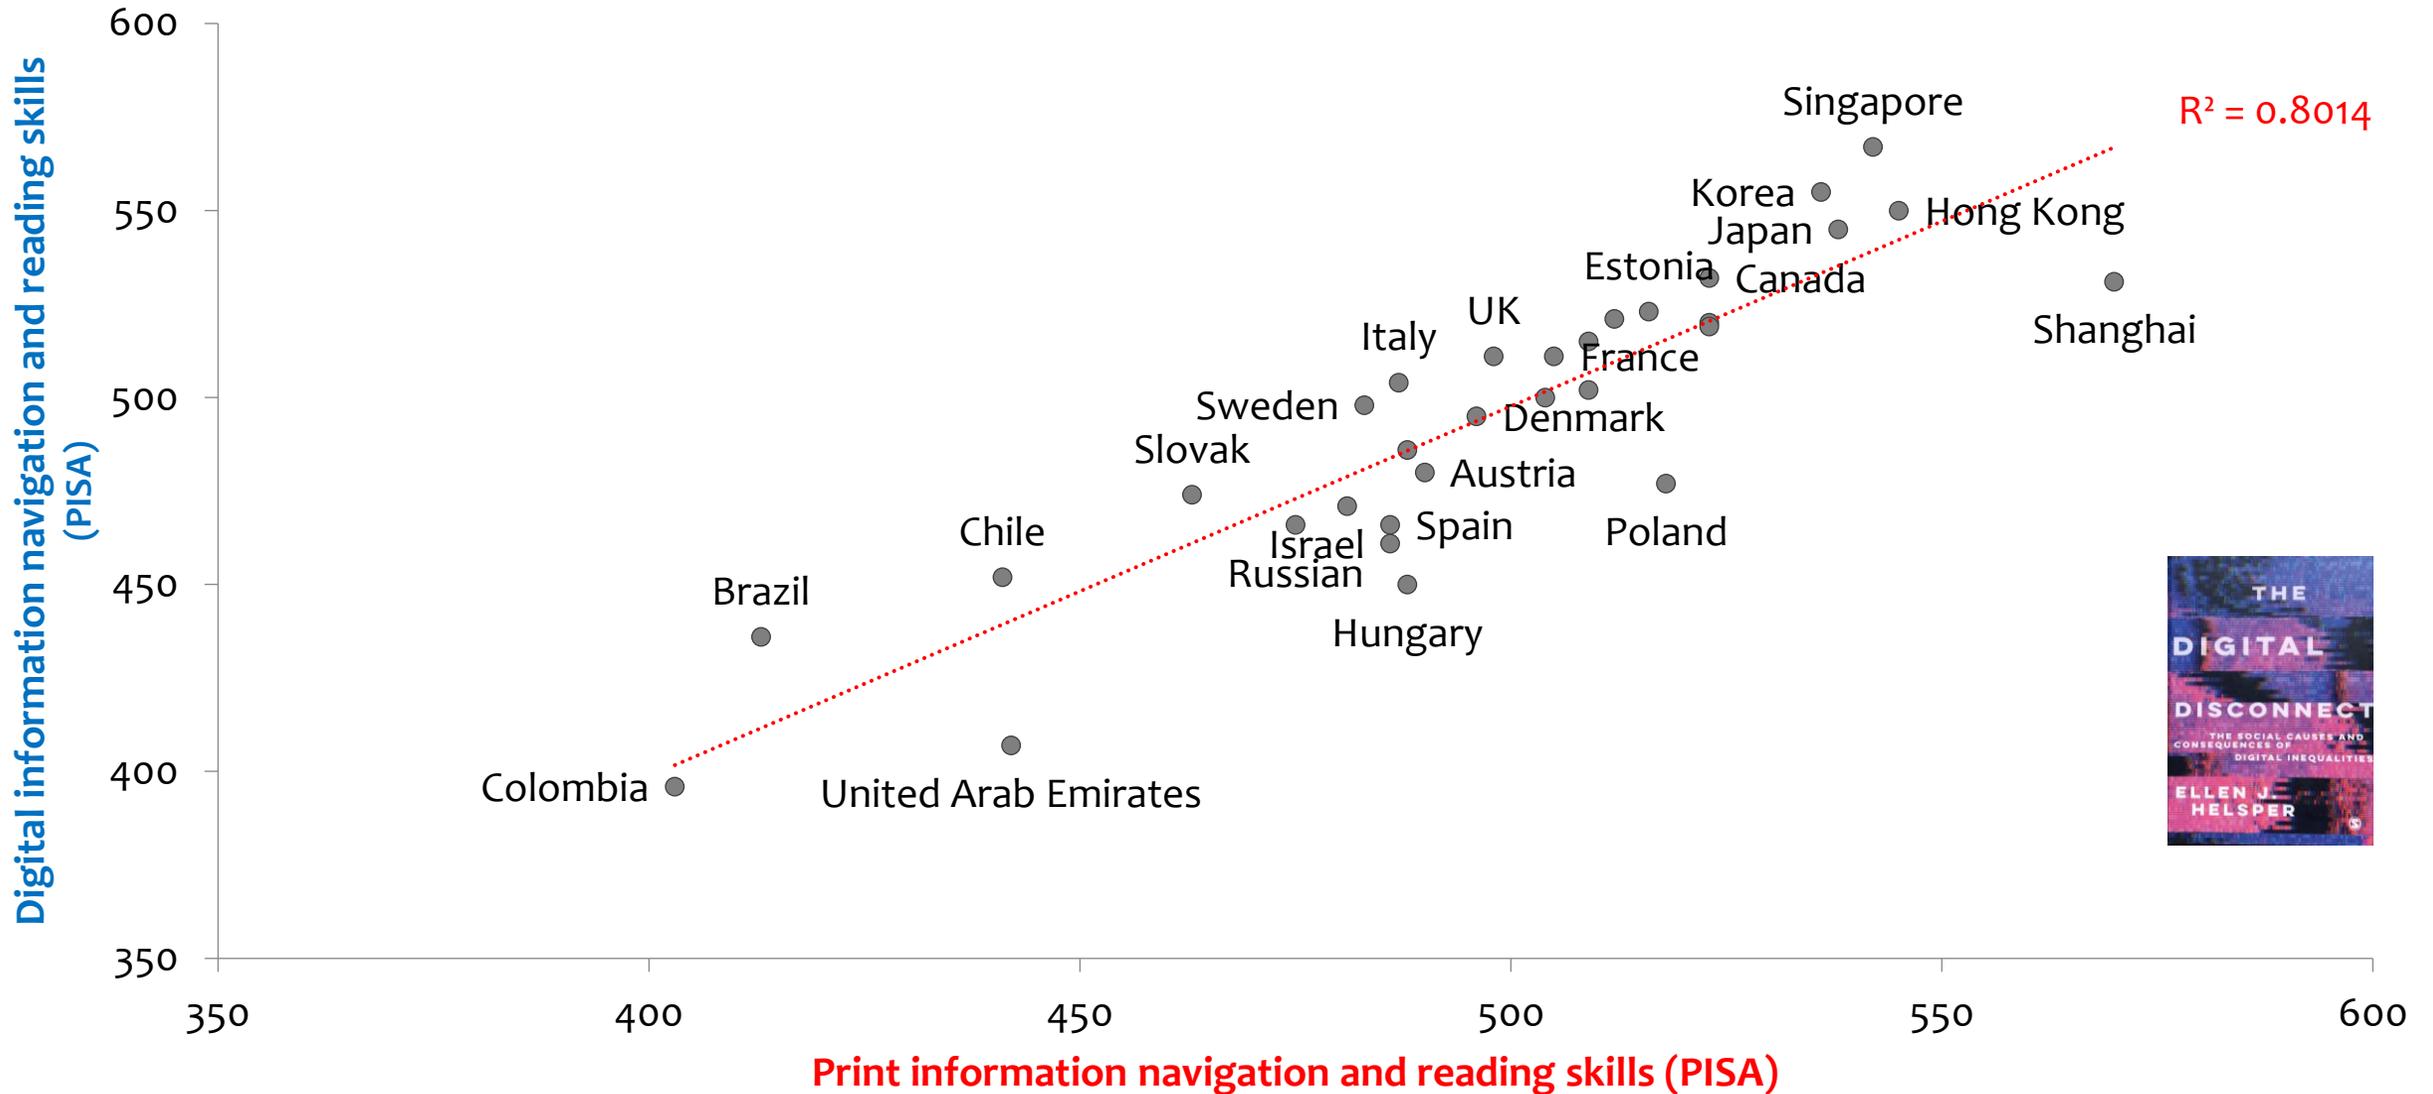

# Critical knowledge: Literacy

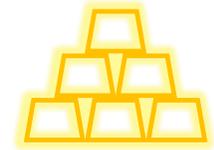

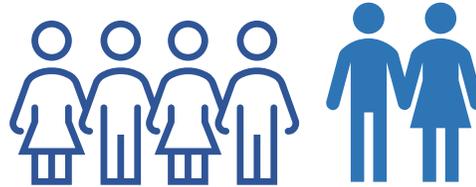

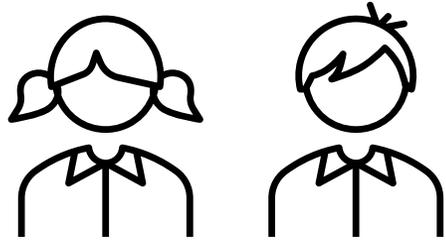

(Helsper, Schneider, Van Deursen & Van Laar, 2021 )

# Inequalities in information navigation and critical literacy (for passive participation)

# Inequalities in digital **self-confidence** and **skill** levels

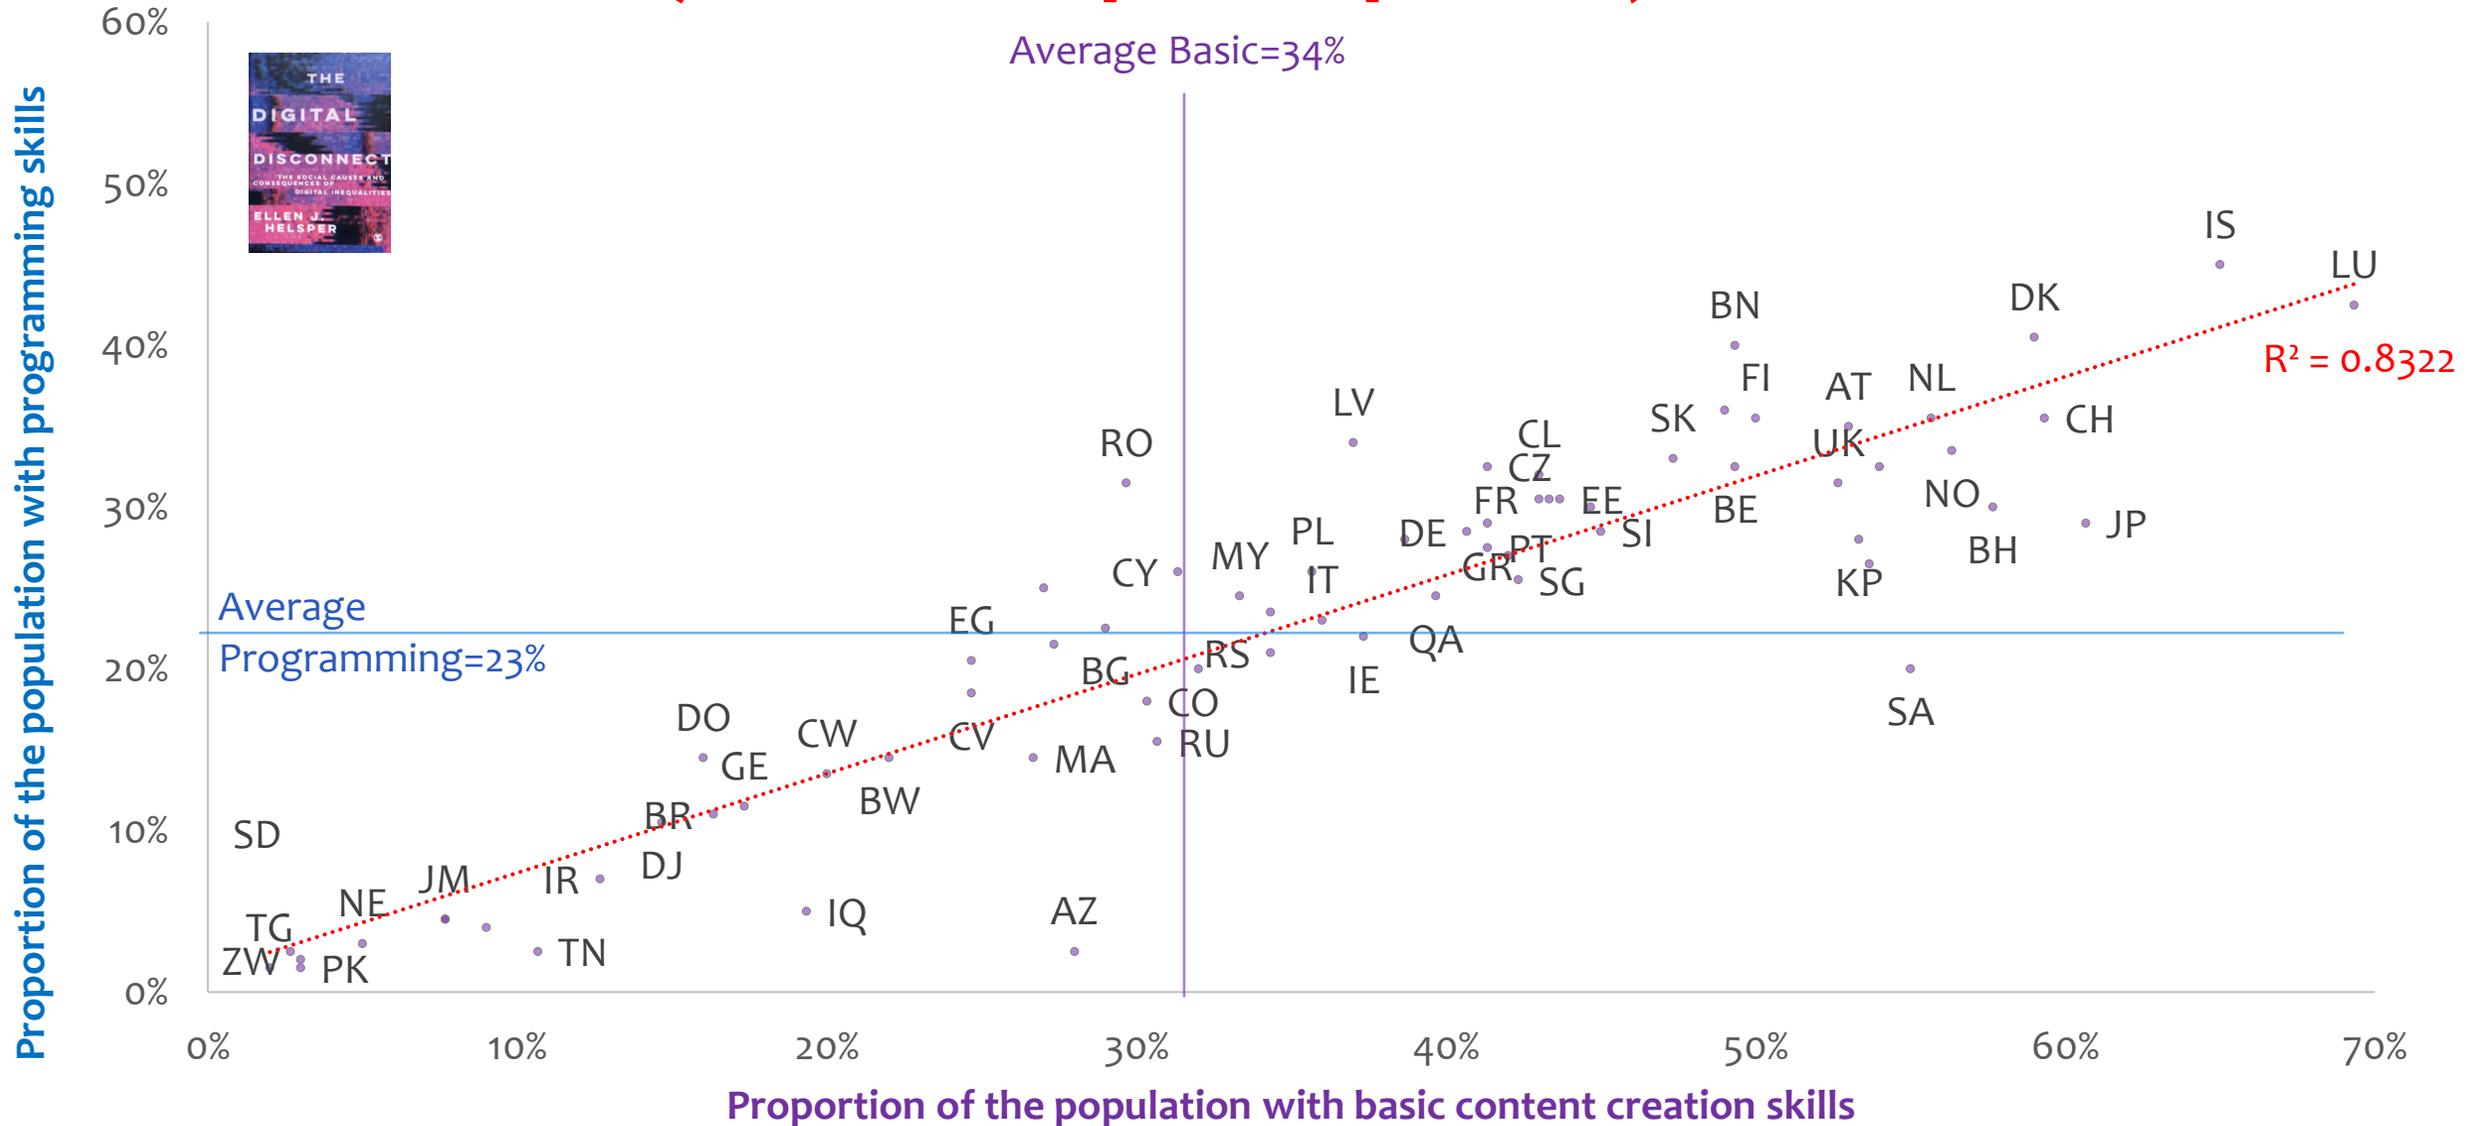

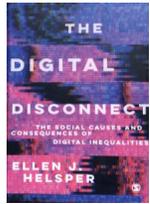

Self-confidence

Skills

# Inequalities in content creation literacy (for active participation)

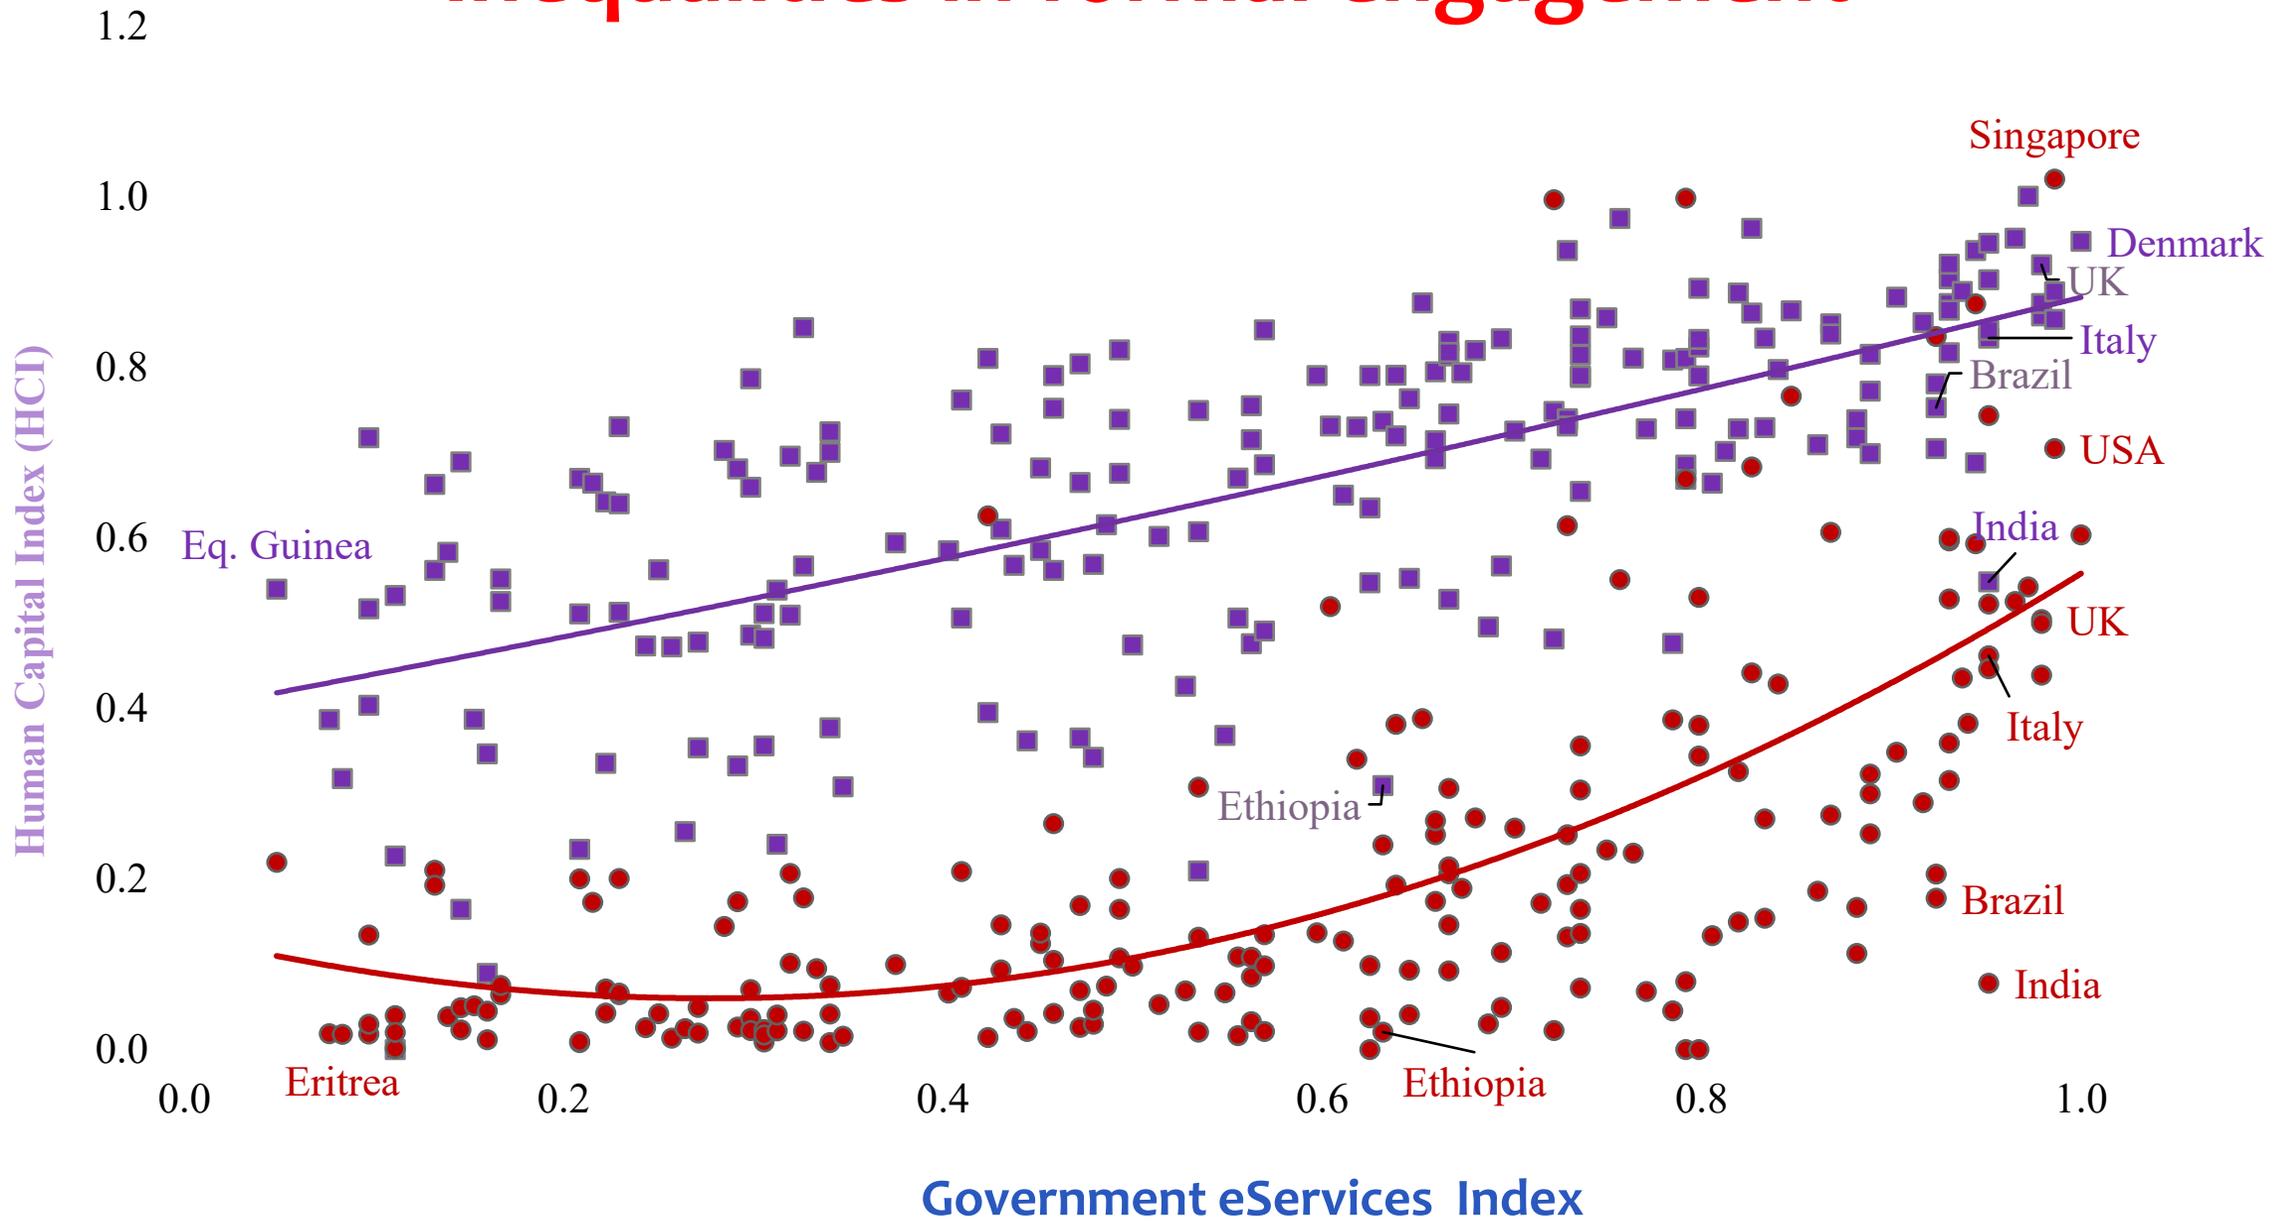

# Digital Content and Engagement

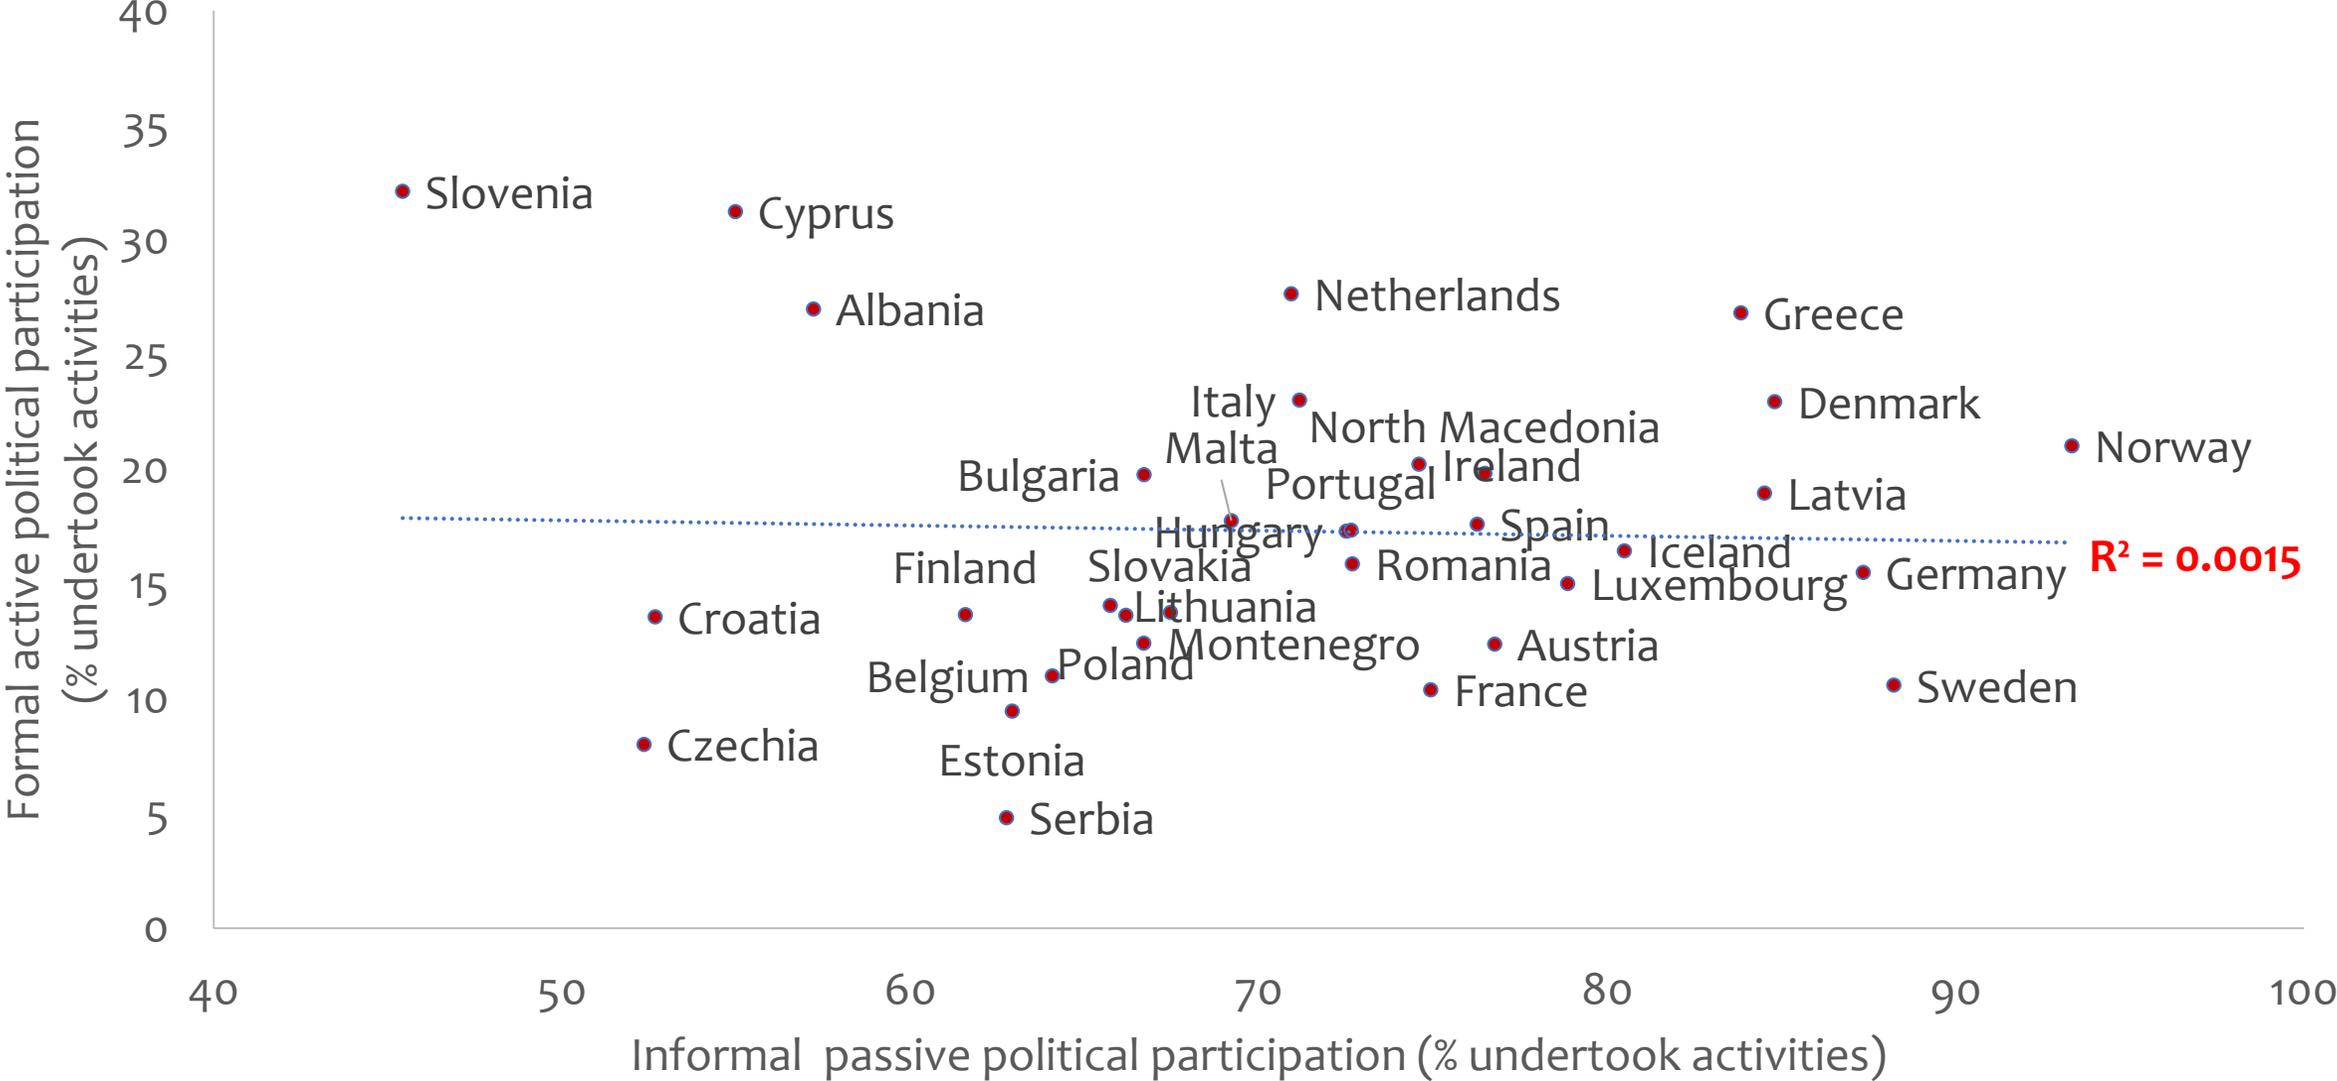

A network diagram consisting of numerous black circular nodes connected by thin black lines, set against a solid red background. The nodes are arranged in a complex, interconnected pattern, resembling a social network or a digital content structure. The connections are mostly straight lines, forming various geometric shapes like triangles and quadrilaterals. The overall layout is spread across the width of the image, with some clusters and some isolated nodes.

For participation and  
empowerment

# Inequalities in formal engagement

# Inequalities in formal and informal civic engagement

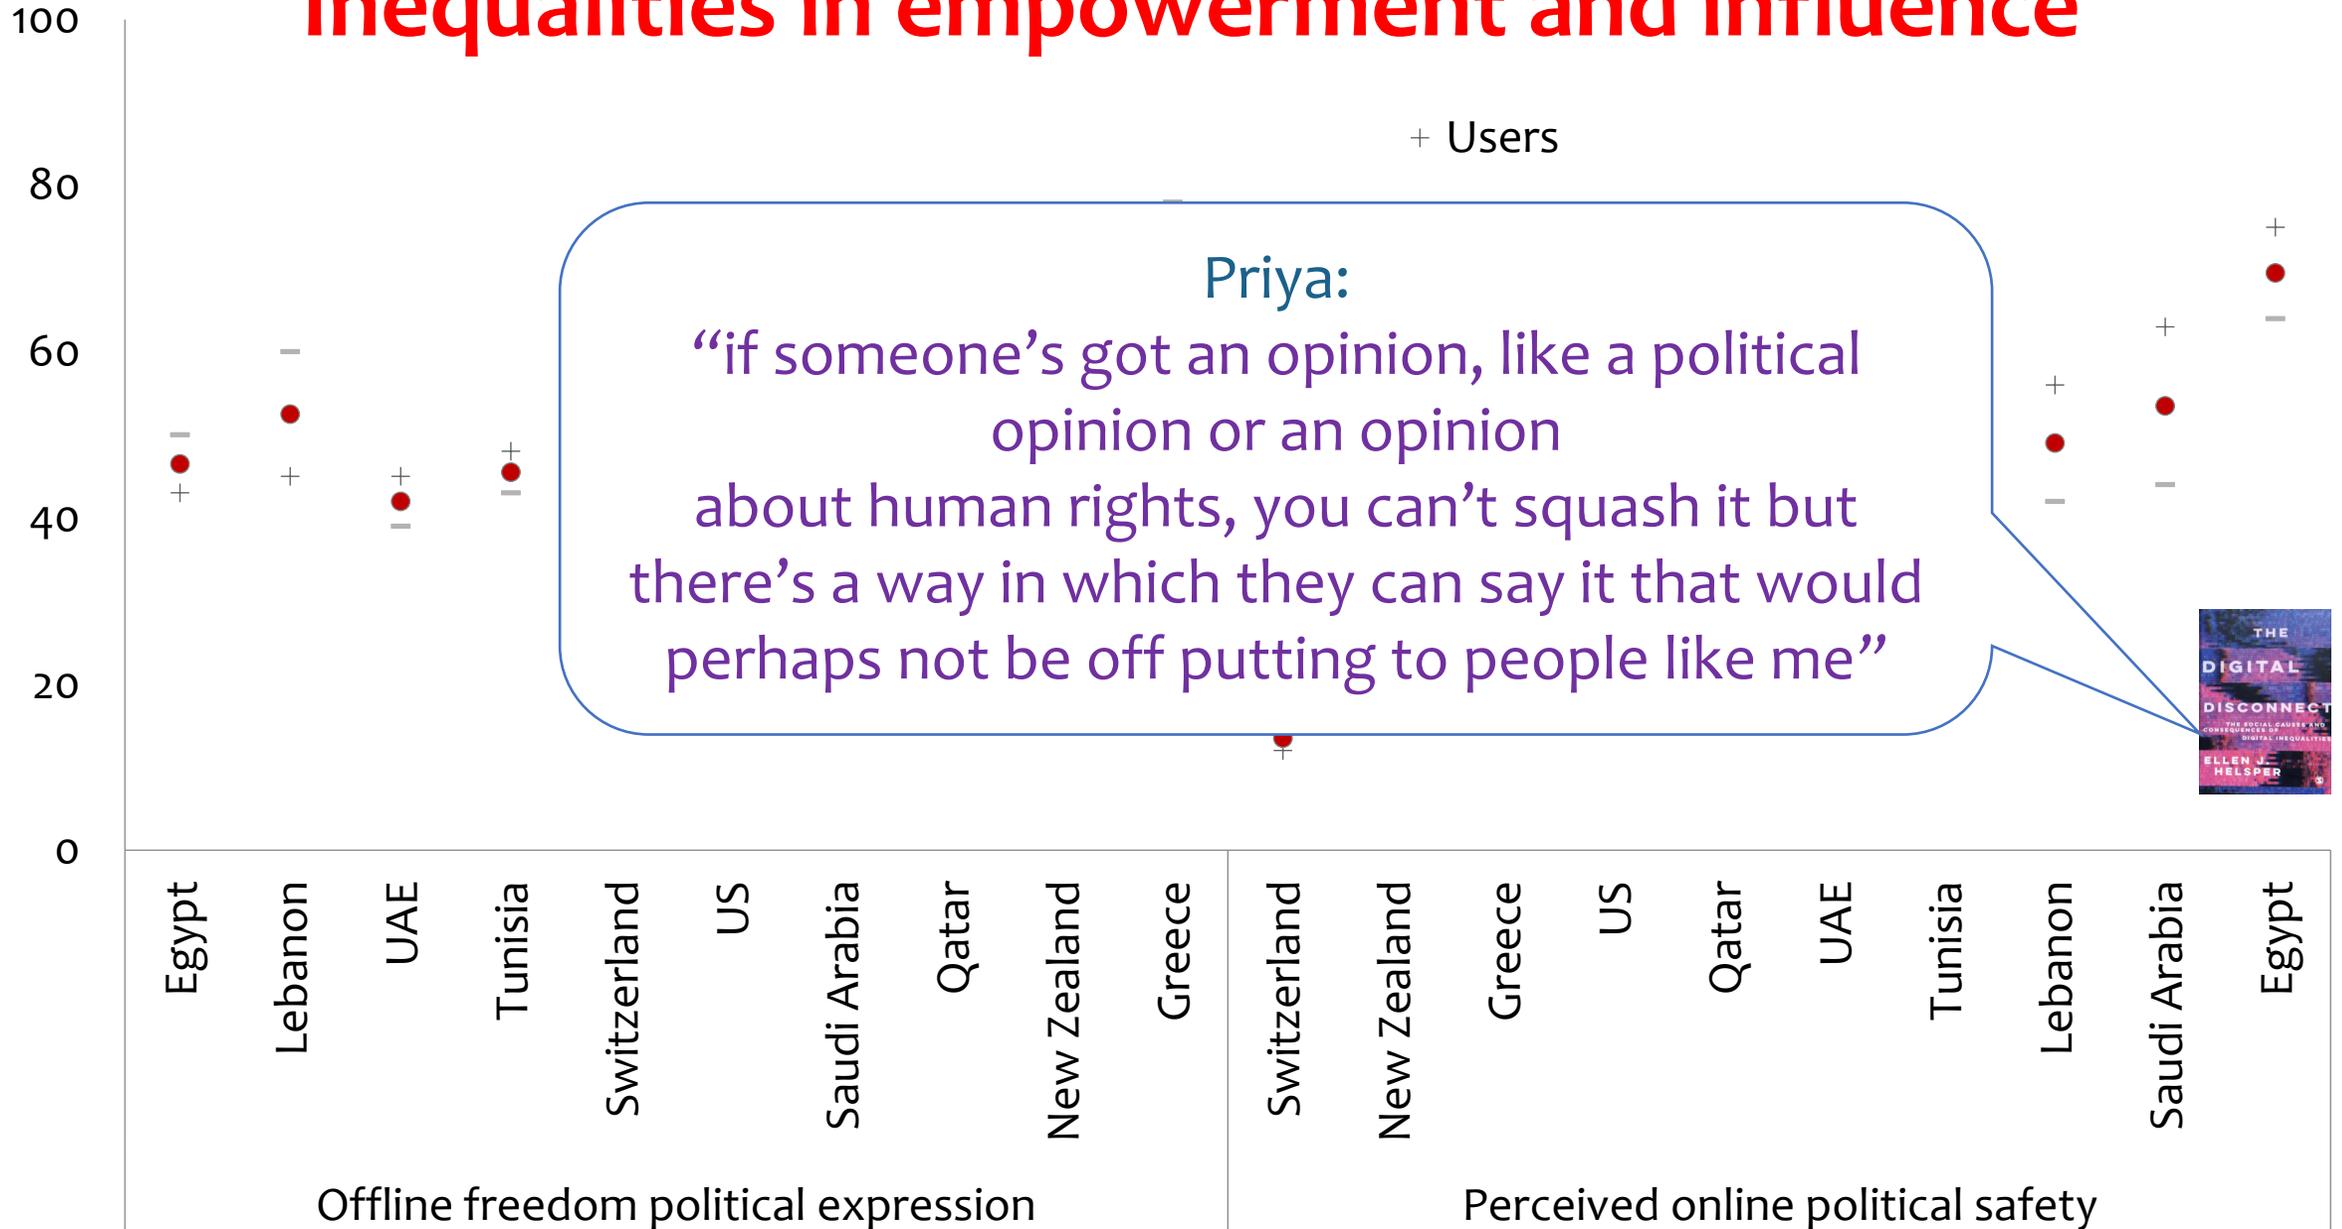

# Participation and empowerment

Outcomes of the digitisation of everyday life

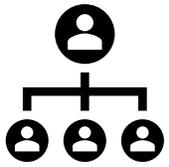

# Inequalities in empowerment and influence

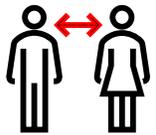

% that somewhat or completely agrees

# Inequalities in silencing, alienation and segregation

Socio-economic status

Socio-cultural marginalisation

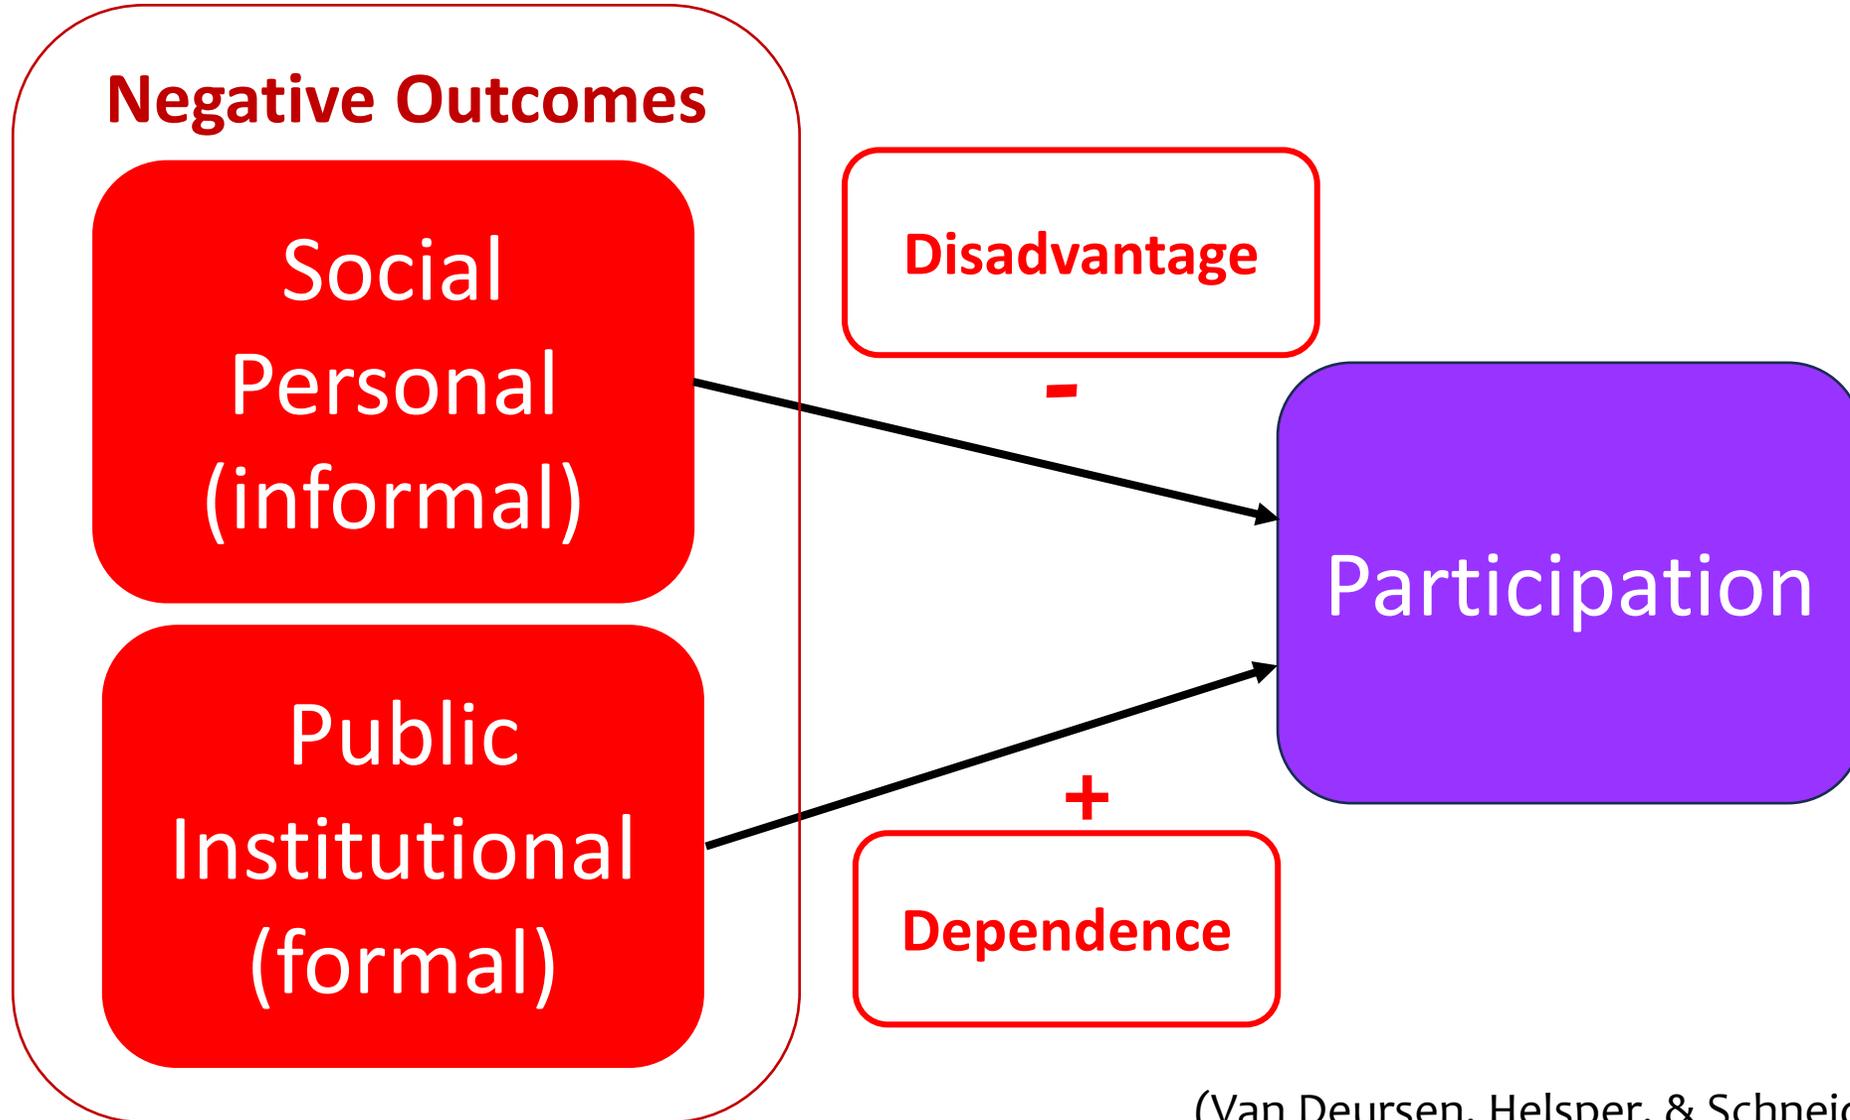

Carol:  
“The only people on my Facebook and WhatsApp are people that I know, have gone to school with, people that I’ve been with, people that I talk to all the time, stuff like that.”

Junwen:

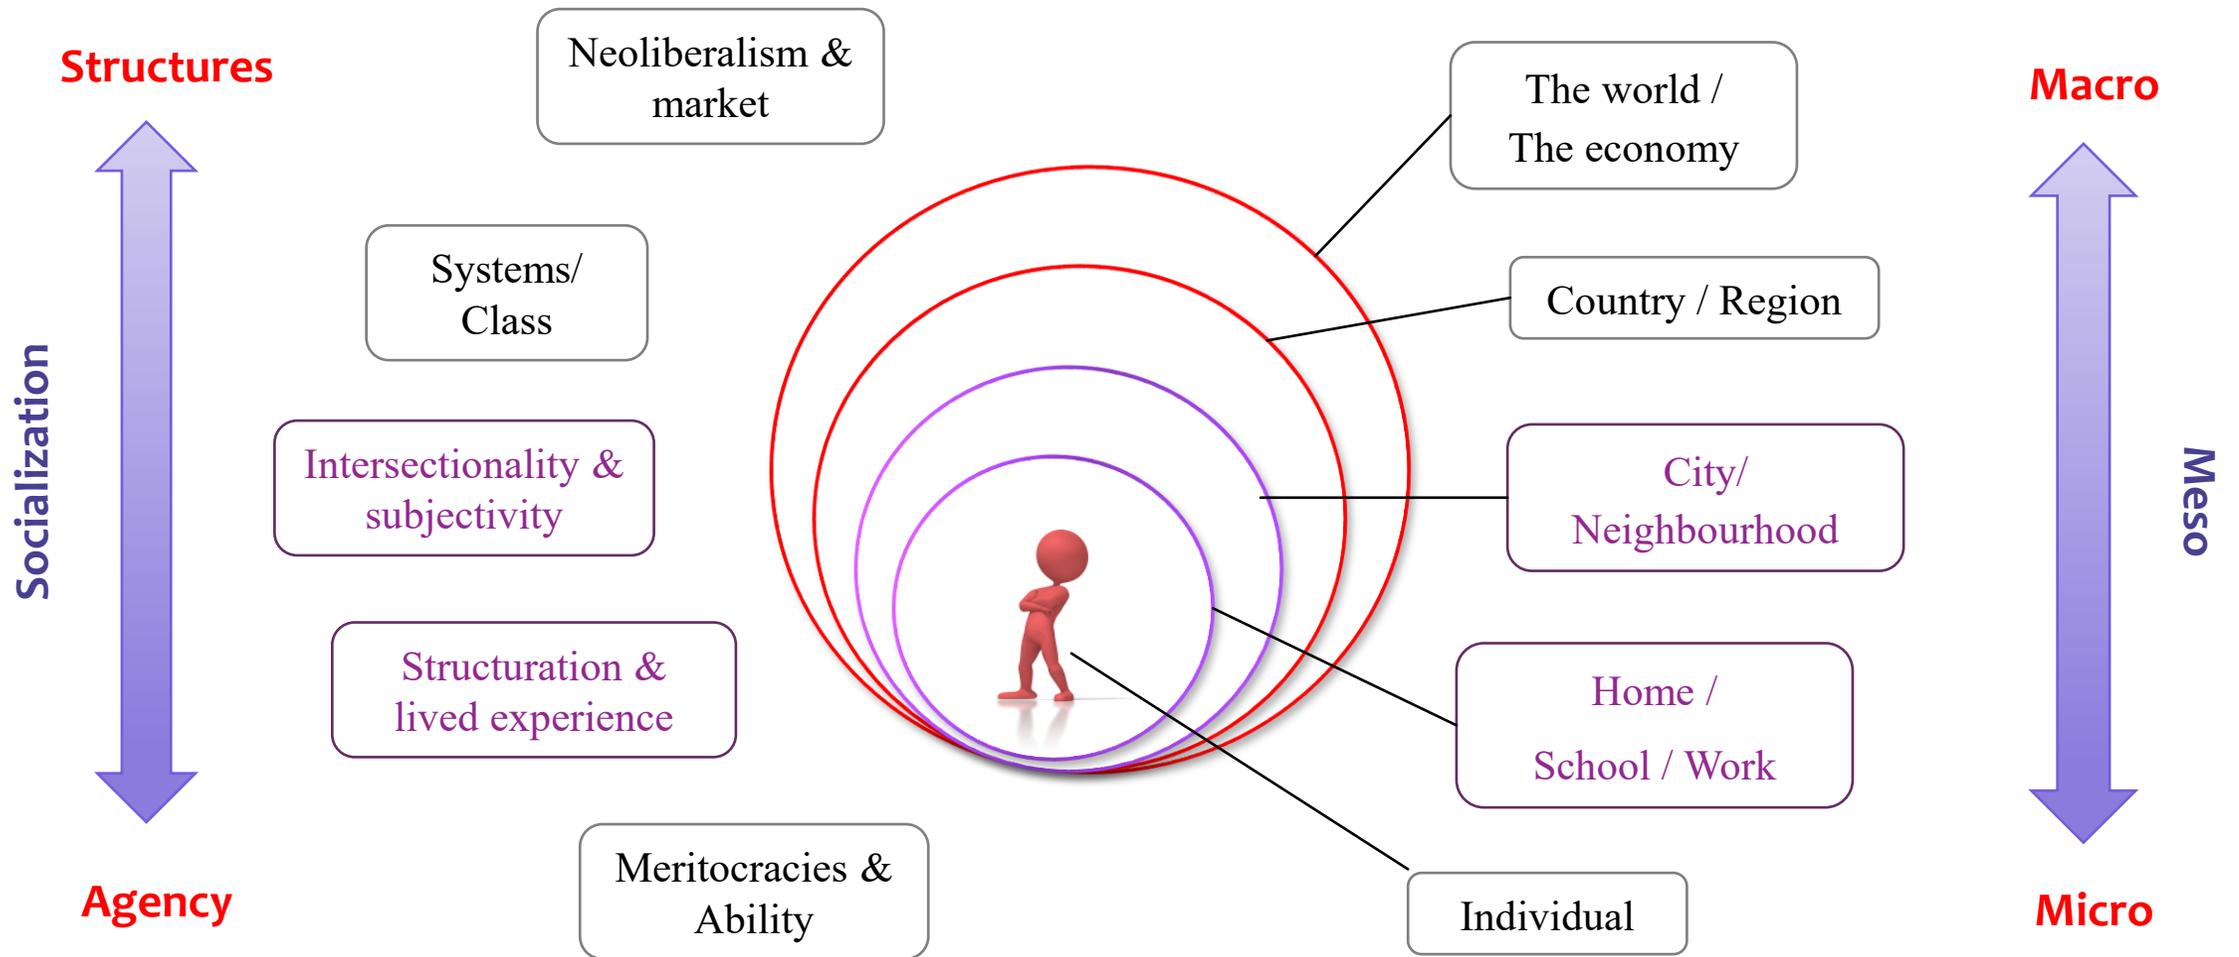

“The positive side is that it allows someone [like me] to start to explore tentatively, in a world that is full of discrimination, to get to know people that are like me bit by bit, earn the trust”

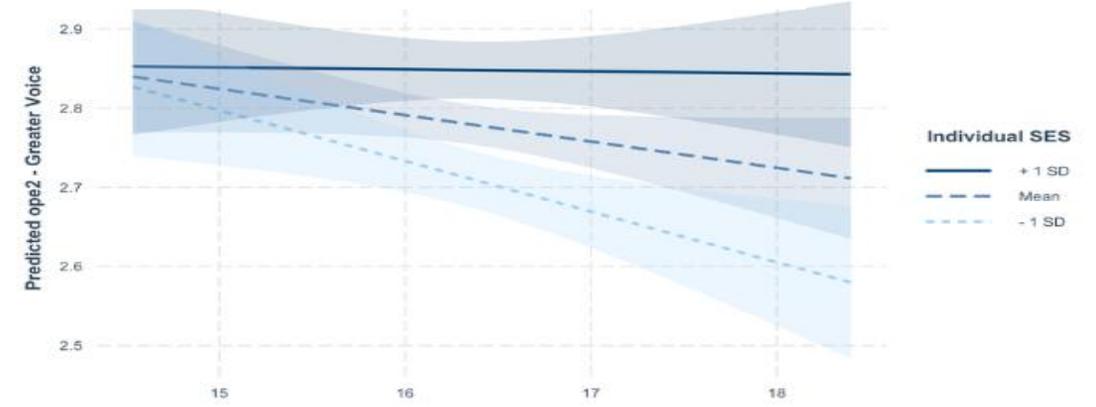

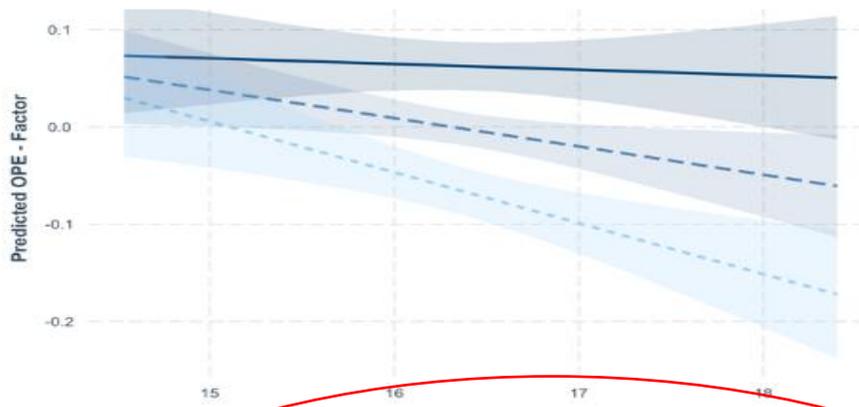

# Intersectional inequalities in participation

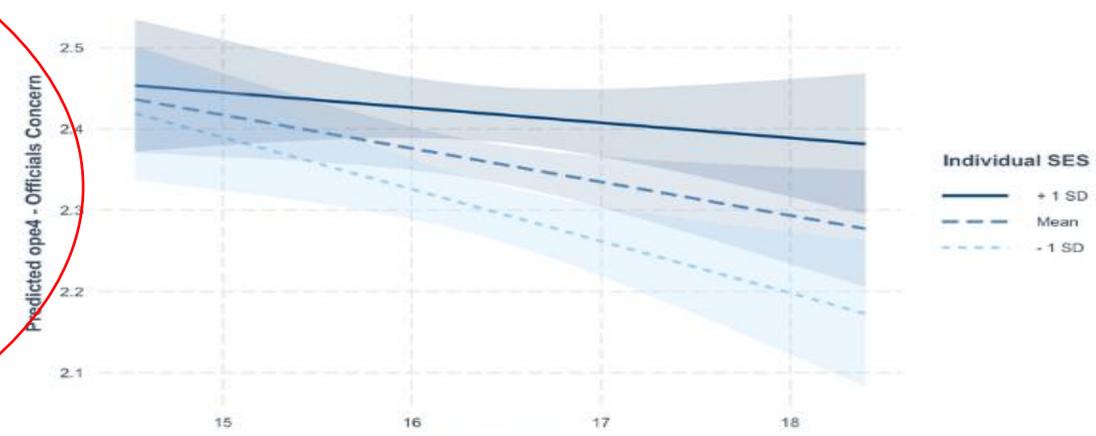

(Van Deursen, Helsper, & Schneider, under review)

# Local digital context and civic engagement

Municipal Wealth

Municipal Wealth

(Fierro, et al 2025)

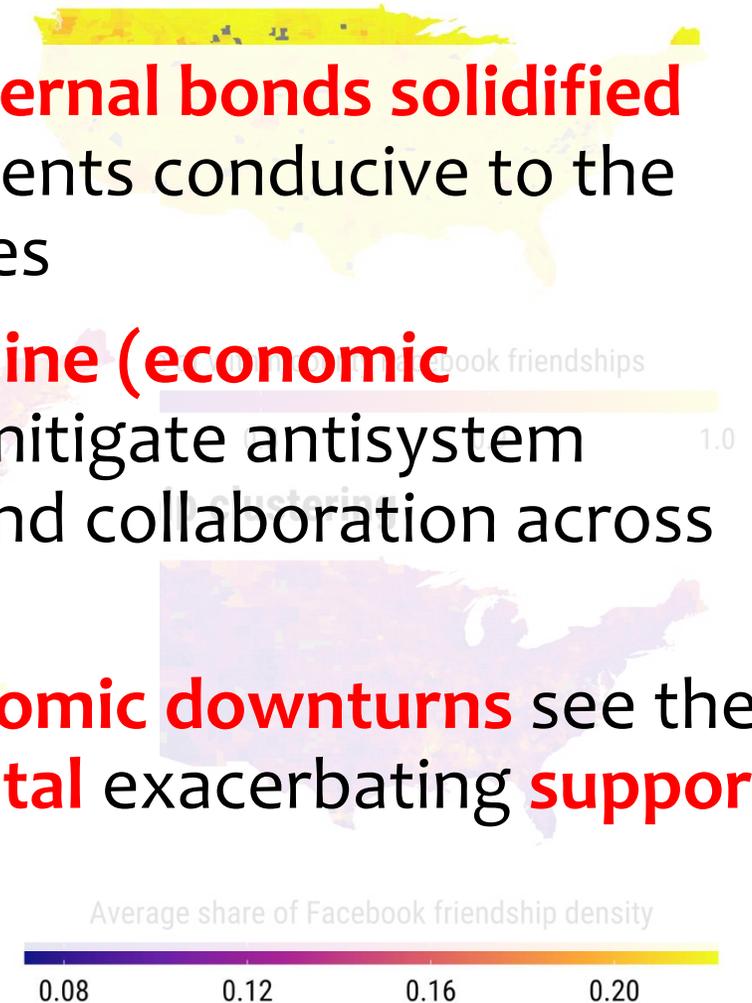

# Social digital context and political participation

## Civic Organizations

- **Tightly knit communities with strong internal bonds solidified online (bonding capital)** foster environments conducive to the spread of populist or nationalist ideologies
- **Diversity and cross-class interactions online (economic connectedness/ bridging social capital)** mitigate antisystem sentiments by fostering understanding and collaboration across social divides.
- Regions that have faced **prolonged economic downturns** see the reinforcing effects of **bonding social capital** exacerbating **support for populist leaders**

## Support Network

# All together? Who benefits where?

- **Historical inequalities in literacy, participation and empowerment** shape who (can) participates and in which ways online.
  - **Digital** inequalities cannot be seen as separate from **structural** inequalities
- It is important to **distinguish different types of digital participation** and look at how the **experiences** of these types of participation **shape outcomes** in terms of empowerment and civic participation.
  - **Consequences cannot** be derived from **use**.
- **Where people live and who they interact with (online)** makes a difference in terms of how inequalities at the individual level express themselves. Digitisation can create or restrict opportunities depending on the characteristics of the individual living in these communities.
  - **Digital inequalities cannot** be understood at the level of the **individual**.
